Kobiton + Applitools Eyes

Visual AI Testing on Real Mobile Devices

WHAT IT IS

The **Kobiton + Applitools Eyes** integration lets teams run Appium tests on real iOS and Android devices in Kobiton while using Applitools Visual AI to automatically validate UI correctness.

Run your existing Appium scripts, capture screenshots on real devices, and analyze visual changes with AI. Visual test status appears directly in **Kobiton**, with one-click access to **Applitools** results.

WHY IT MATTERS

- ✓ Catch real-world visual defects that emulators miss
- ✓ Reduce flaky, pixel-based visual tests
- ✓ Accelerate automation adoption without rewriting scripts
- ✓ Increase confidence in every mobile release

KEY CAPABILITIES

Real Device Execution
Run Appium + Applitools on real phones and tablets

AI-Based Visual Validation
Detect unintended UI changes automatically

Inline Test Status in Kobiton
See Passed, Failed, Running, or Unresolved at a glance
